PROFESSIONAL SUMMARY

Full-stack developer with 4+ years of experience shipping production web applications in React.js, Next.js and Node.js, with recent experience in workflow automation and deployment. Builds Zapier, n8n and Klaviyo automations that connect business tools and replace manual data entry with reliable, hands-off workflows. Co-founded an e-commerce business in 2022 and owned its technology end to end through 2025: architecture, development, deployment, and ongoing improvement. Currently deepening skills in CI/CD and cloud infrastructure.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3
Frontend: React.js, Next.js
Backend: Node.js, Express.js, Nest.js, Laravel, REST APIs
Databases: MySQL, MongoDB, PostgreSQL, Prisma ORM
Automation: Zapier, n8n, Klaviyo
DevOps: Docker, GitHub Actions, CI/CD, Git, GitHub, Linux
Practices: Agile/Scrum

PROFESSIONAL EXPERIENCE

Automation Engineer — Task Easy

Feb 2026 – May 2026

- Set up Zapier and n8n workflows to sync data between our marketing, CRM and operations tools, which ended a lot of manual copy-paste work.
- Set up Klaviyo email flows for welcome, abandoned cart and win-back campaigns, and segmented customers based on purchase behavior.
- Automated our weekly reports by pulling data from different tools through webhooks and APIs.

Co-Founder & Lead Developer — Wave Lifestyle

Mar 2022 – Dec 2025

- Co-founded an e-commerce business and served as sole developer, owning all technical decisions from architecture through deployment and ongoing maintenance.
- Built a custom storefront from scratch using Next.js, Express.js, and MongoDB, implementing product catalog, shopping cart, checkout flow, and order management.
- Developed RESTful APIs with JWT-based authentication to handle user accounts, order processing, and admin dashboard access.
- Designed MongoDB schemas and data models for products, customers, and orders to support core e-commerce workflows.
- Maintained the platform through launch and early growth, then led the migration to a managed solution as the business scaled.
- Contributed to business operations including product listings, content, and pricing, using sales data and customer feedback to improve the shopping experience.

Full Stack Developer — Ayoojon

Feb 2021 – Mar 2022

- Built the frontend of an event management platform in React.js, then migrated to Next.js for server-side rendering, improving page load performance and SEO.
- Developed RESTful APIs using Node.js and Express.js for event creation, booking workflows, and user account management.
- Implemented authentication flows for user registration, login, and profile management across organizer and attendee roles.
- Collaborated with design and QA teams to ship features from concept to production on a startup release cycle.

Career Break (Government Exam Preparation) *May 2017 – Feb 2021*

- Took time off to prepare full-time for government job exams in Bangladesh.

Web Developer — Amar Bike *Jun 2016 – May 2017*

- Developed an online ride-booking system using PHP and Laravel, enabling customers to search, select, and reserve rides through a web platform.
- Built an administrative dashboard in Laravel for booking management, driver coordination, and daily operations reporting.
- Maintained and improved the platform based on feedback from customers and the operations team, resolving bugs and refining booking workflows.

PROJECTS

Merch Sports (Client Project) | merchcommunication.com | github.com/rezwan-hossain/merch-sports

Full-Stack Marathon/Event Registration Platform

- Built a marathon event platform using Next.js and TypeScript, enabling runners to browse events, register online, and manage participation for 5,000+ registrations.
- Integrated SurjoPay payment gateway for secure registration fees, handling payment initiation, verification, and transaction status updates.
- Implemented PostgreSQL with Prisma ORM to store event, participant and payment data.
- Configured CI/CD workflows using GitHub Actions for automated deployment to a Linux VPS.

Venus Corporation (Client Project) | venuscorporation.org | github.com/rezwan-hossain/venuscorporation

Business Summit & Portfolio Platform

- Built a business portfolio and summit platform enabling 100+ business owners to explore company profiles and purchase event tickets.
- Integrated SSLCommerz payment gateway for secure ticket purchases, handling payment processing, callback verification, and order confirmation.
- Developed the registration system with attendee management and business profile display using Next.js, PostgreSQL, and Prisma ORM.
- Deployed the platform online and managed ongoing development using Git and GitHub.

E-Commerce REST API (Personal Project) | github.com/rezwan-hossain/ecomerce-nestjs-backend

E-Commerce Backend

- Built an e-commerce REST API with NestJS, TypeScript, PostgreSQL and Prisma.
- Split the app into separate modules for products, customers and orders, each with its own controller and service.
- Wrote endpoints for managing products, handling customer accounts and placing orders.

EDUCATION

B.Sc. in Computer Science & Engineering — Green University of Bangladesh *2017*
